

Dear colleague,

We'd like to inform you that we are organizing a course entitled

**"Current Processor Architectures and Compiler Techniques"**

within the framework of an European project called ANTITESYS.

The objective of the project is to train personnel in designing and manufacturing embedded systems. It also tries to promote the mobility between different European universities.

Within this context we have organized a course for **April 13-16, 2004** that could be of interest to many of your students. The course will be taught by leading professors in this field coming from European and American universities.

The registration fees are 90 euros. You can find additional information for the course and the registration procedure at the URL:

[HTTP://RESEARCH.AC.UPC.ES/CAP/ANTITESYS](http://RESEARCH.AC.UPC.ES/CAP/ANTITESYS)

We'd like that you could widespread this message to the people involved in your research group and of course to everyone that you think could also be interested in its attendance.

Thank you very much for your collaboration.

Best regards,

Antonio González and Jordi Tubella
